Version 14.5 highlights

- ✓ Direct import from corporate DB
- ✓ Distribution charts at multi-levels
- ✓ Multiple disciplines of floor plans
- ✓ Detail tracking of room changes

Facilities Lifecycle Software Solutions

NAVIGATOR helps Owners and Project Managers gain clear visibility into how campus space is being used and where improvements can be made.

Track space utilization down to the room level, including department occupancy, room use, functional codes, assignable square footage, funding classification, and utilization categories. NAVIGATOR also provides visibility into the equipment and personnel assigned to each space.

Pre-formatted reports allow Owners and Project Managers to review space by division, building, department, and functional area, while charts and graphical reports make utilization trends easier to understand.

With centralized, cloud-based access, NAVIGATOR helps teams improve space planning, identify underutilized areas, support better facility decisions, and access accurate space information anytime, anywhere.

Project management designed for Owners and Project Managers.
